Install this screw all the way,
but do not tighten it.

Assembled View

Keep these nuts loose (about 2-3 turns).

| ITEM NO. | DESCRIPTION | QTY. |
|----------|--------------------------------------|------|
| 1 | Parking Post Base with Inserts | 1 |
| 2 | M5 Buttonhead Screw, 10mm long | 2 |
| 3 | M5 Drop-In T-Nut for 20x20 Extrusion | 2 |
| 4 | M3 Buttonhead Screw, 8mm long | 1 |

When the post is installed on the machine,
use the top screw to fine-tune the height at
the parking location.

Use the two screws in the
pockets to set the parking
position.

Machine Installation Overview:

1. Install the parking post on the frame in approximately the right position. Loosen both the two M5 screws and the back two M3 screws such that the parking post can wiggle up-and-down and slide left-and-right.

2. Release any active tools. Move the carriage away from the tool rack and load the corresponding tool into the carriage by hand. Lock the tool with the tool-change macro. (Doing so manually will not apply that tool's offsets, which will throw off the parking post location setting.)

Warning: the next steps involve moving the carriage with the tool on it.

3. Gradually step the carriage (with the tool loaded) into the parking post at the pre-defined "tool release" position defined in the macro file for that tool. Move the parking post location by hand such that the tool slides smoothly onto the guide pins. (The middle M3 screw can help fine-adjust the parking post height.)

4. With the location set, fully tighten all screws (except the middle M3 screw). Invoke the tool-change unlock macro to release the tool into the post. Then back the carriage out of the tool.

5. Run a test tool change cycle. Note: when the tool is picked up and dropped off, the tool should **not** noticeably jiggle in and out of the parking post.
